Pokémon Omega Ruby has been confirmed as a 3DS title, as it contains a game disc. As this was revealed at a Nintendo press conference, it is only logical that this was the title shown . A: I am afraid you cannot play Pokémon Omega Ruby using citra. It requires NTRUSIVA or below in order to run. Source: Play-Asia A: There is no working native version of Pokémon Omega Ruby for Citra. You can, however, play it on NTRUSIVA (which you can get from the Nintendo's website) There is also a native version of Alpha Sapphire for Citra Q: Trying to pull event on a div that is a child of a table and not parent from firebase I am trying to pull the event(s) from a div in Firebase, however it will not pull

anything. I can access everything else in the database but for some reason not the event. What am I doing wrong? I have tried making the div itself a firebase database node using children of that node but that did not work either. I have also tried nested loops but that did not work either.

```
var ref =
firebase.database().ref("Events");
ref.orderByChild("eventTitle").equalTo("Urban
Outfitters") .on("value", function (snapshot) {
console.log(snapshot.val()); });
```

A: Try this way:
Firebase DB Code : { "events" : [{ "eventTitle" :
"Urban Outfitters", "eventDesc" : "The store's street-
level location.", f678ea9f9e
