Offering a feature-rich solution, AccountRight contains built-in management, finance, inventory and more, allowing. The present invention relates to a biocidal composition which can be used to prevent the formation of microorganisms on and in foods. In particular, the present invention relates to a biocidal composition which can be used to prevent the formation of microorganisms on and in meats. As a result of processing, packaging, shipping, and storage, meats, such as chicken, turkey, and beef, as well as fish and shellfish, can come into contact with microorganisms. The presence of microorganisms in meats can produce putrefactive decomposition of the meat and its oxidation products, and the presence of such microorganisms can also produce the development of color and flavor defects in the meats. The growth of microorganisms on and in meats can also be reduced by the use of natural ingredients such as salts, spices, sodium nitrite, pepper, herbs and the like. For example, U.S. Pat. No. 4,788,076 to Rifkind, et al. relates to an antimicrobial composition and method for reducing or inhibiting the growth of microorganisms on and in meat. The antimicrobial composition includes butyric acid, alone or in combination with phosphoric acid, and may be coated on meats such as beef, pork, fish, and poultry. The preferred composition includes butyric acid in combination with phosphoric acid. In addition, sodium nitrite is taught as a further ingredient for inhibiting the growth of microorganisms on meats. U.S. 82157476af
